*1 If even a single overcurrent is detected, the protection operation (output turned OFF) and automatic recovery are repeated for all outputs within the shared common (The outputs within the shared common that are protected when an overcurrent is detected are outputs 000 to 007 or 008 to 015 for the case of the KV-N16ET(P).) , until the cause of the problem is removed.

*2 MOSFET (N-ch) output for the sink output type; and MOSFET (P-ch) output for the source output type.

*3 The KV-N8ET(P) and KV-N16ET(P) COM terminals are shorted internally.
