| Weight                       |                                      | Approx. 120 g |  |

\*1 If even a single overcurrent is detected, the protection operation (output turned OFF) and automatic recovery are repeated for all outputs within the shared common (The outputs within the shared common that are protected when an overcurrent is detected are outputs 000 to 007 or 008 to 015.), until the cause of the problem is removed.

\*2 Sink output types use MOSFET (N-ch) output. Source output types use MOSFET (P-ch) output.

\*3 The rated load of each common terminal is 3.2 A

\*4 The COM terminals are shorted internally.
